

The Office of Airports did not have any OSH related injuries or illnesses for FY03.

We have informed our managers/employees about safety prevention and they have been instructed to contact the proper personnel to handle the problem before it becomes a major problem.

A safety check is done on a regular basis to make sure all areas are up to standards and machines are repaired in a timely period.

We have participated in the OSH meetings and address any concerns in our office to prevent any mishaps before they occur.
