

Version: EDMS 3.0, 3.01, 3.02 for Windows™ 3.1 and EDMS 3.01, 3.02 for Windows™ 95
Patch No.: 30-98-06
Date: 03/30/98

Description:

The Emissions Inventory summary report incorrectly adds APU emissions to the aircraft category rather than the GSE/AGE category.

Effects:

The emissions generated from the actual operation of the aircraft will seem higher because they include the APU emissions. Simultaneously the GSE/AGE emissions will be lower by an identical amount.

Workaround:

As a short-term workaround, the analyst will have to obtain their aircraft and GSE/AGE/APU totals from the listing of aircraft emissions by mode.

Correction:

Upgrading to EDMS 3.03 and re-running the emissions inventory corrects this error. For further assistance with this problem please contact EDMS Tech Support at (202)488-0003 or e-mail, edms_help@cssiinc.com.
